Black Widow's Powers

Artificially Enhanced Physiology

Natasha has received the Red Room's variant of the Super-Soldier Serum. As a result, many of her body's physical capabilities have been heightened to the peak of human ability.

Peak Human Strength

Her physical strength is heightened to a level that is beyond the natural physical limits of a woman of her height, weight and build. She is capable of lifting up to 500 lbs.

Peak Human Speed

Her speed is also enhanced to the peak of human capability. Natasha is as fast as a human can be without being classified as superhuman.

Peak Human Agility

Natasha's natural agility is heightened to the peak of human capability. She is as agile as a human being can be without being classified as superhuman.

Peak Human Reflexes

Her reaction time is similarly enhanced and functions with the peak of human efficiency and capability.

Peak Human Durability

Natasha's bodily tissues have been augmented to the pinnacle of human development. Though she can be injured in the typical ways other humans can be, she is as physically tough as a human being can be without being classified as superhuman.

Peak Human Senses

Her five senses are enhanced and function at peak of human perfection.

Peak Human Immune System

While she is susceptible to disease like all other ordinary humans, her ability to resist and recover from them is heightened to the peak of human capability.

Extended Longevity

The serum variant has also extended her lifespan by dramatically slowing her natural aging process. Although she is almost 70 years old, she has the youthful appearance and vitality of a woman in the physical prime of her life.
